

SPECIFICATION AMENDMENTS:

Please amend the paragraph beginning at page 12, line 7, of the specification to read as follows:

-- In the configuration described above, the equalizer bar 20 can be mounted in a narrow space without interfering with main ~~frame~~ flange 10 or members in peripheral portions thereof. In addition, the configuration of the embodiment avoids using the supporting structure as is used in the conventional configuration of the equalizer bar. As such, since local great forces are not exerted on the equalizer bar, deformation, wear, and/or damage of the equalizer bar can be prevented. --
